

Project Rain Barrel

City of Monticello in cooperation with Ball Corporation

Public-Private Partnership

General Project Description

The project's purpose is to relieve utility costs associated with watering gardens, flower beds, or lawns. Project rain barrel incorporated practices have achieved an environmental benefit by using storm water runoff from non-permeable surfaces to permeable ground, gardens, and flower beds. The project reduces storm water flow into rivers, lakes, and combined sewers. Project Rain Barrel provides rain barrels to the community free of charge.

BALL CORPORATION - PROJECT RAIN BARREL

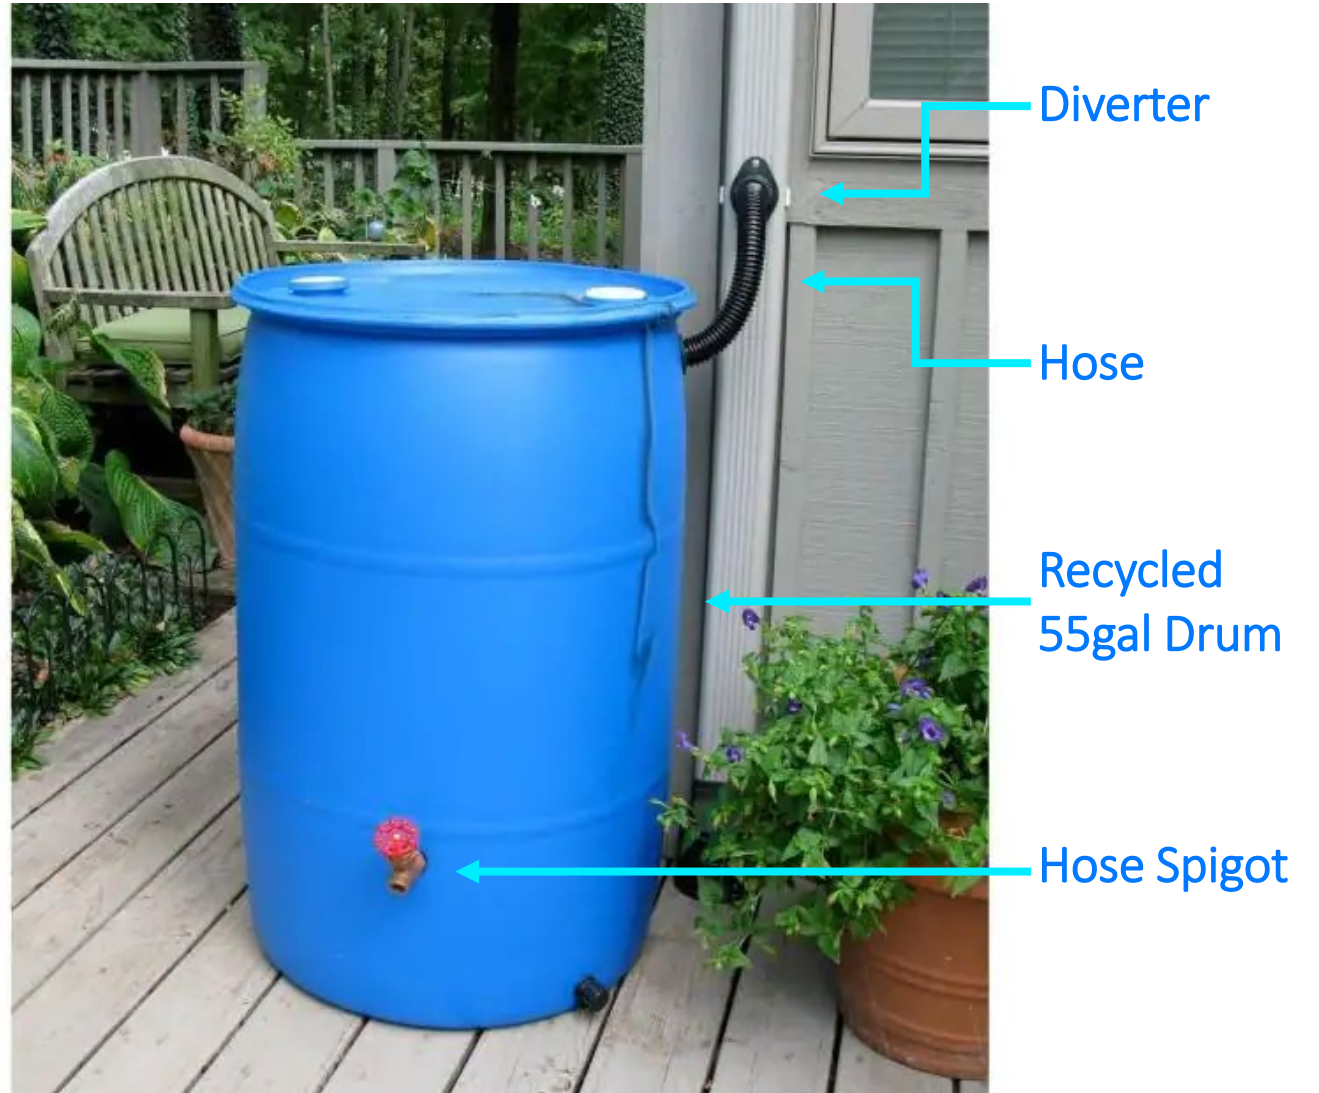

Our Global Sustainability Vision:

Ball Corporation is committed to economic, environmental, and social sustainability. We are focused on making products that contribute to the circular economy and supporting creative and innovative opportunities for recycling and reuse.

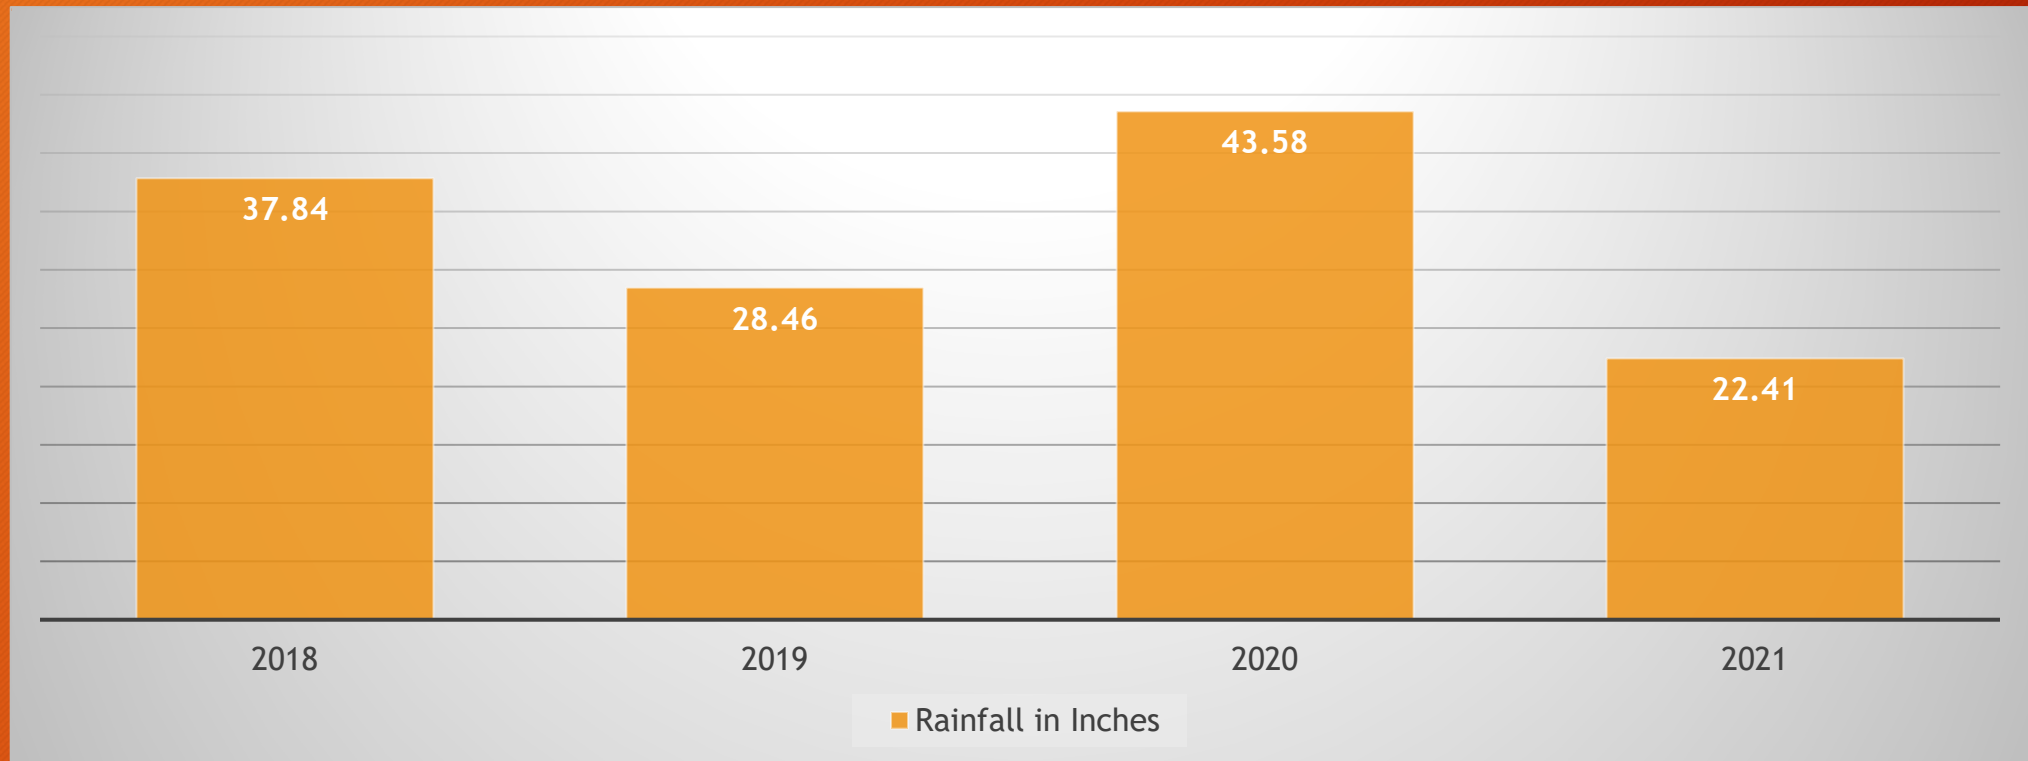

By improving our products and our business, we can also improve the well-being of our employees and the communities where we operate.

Monticello, IN – Project Rain Barrel

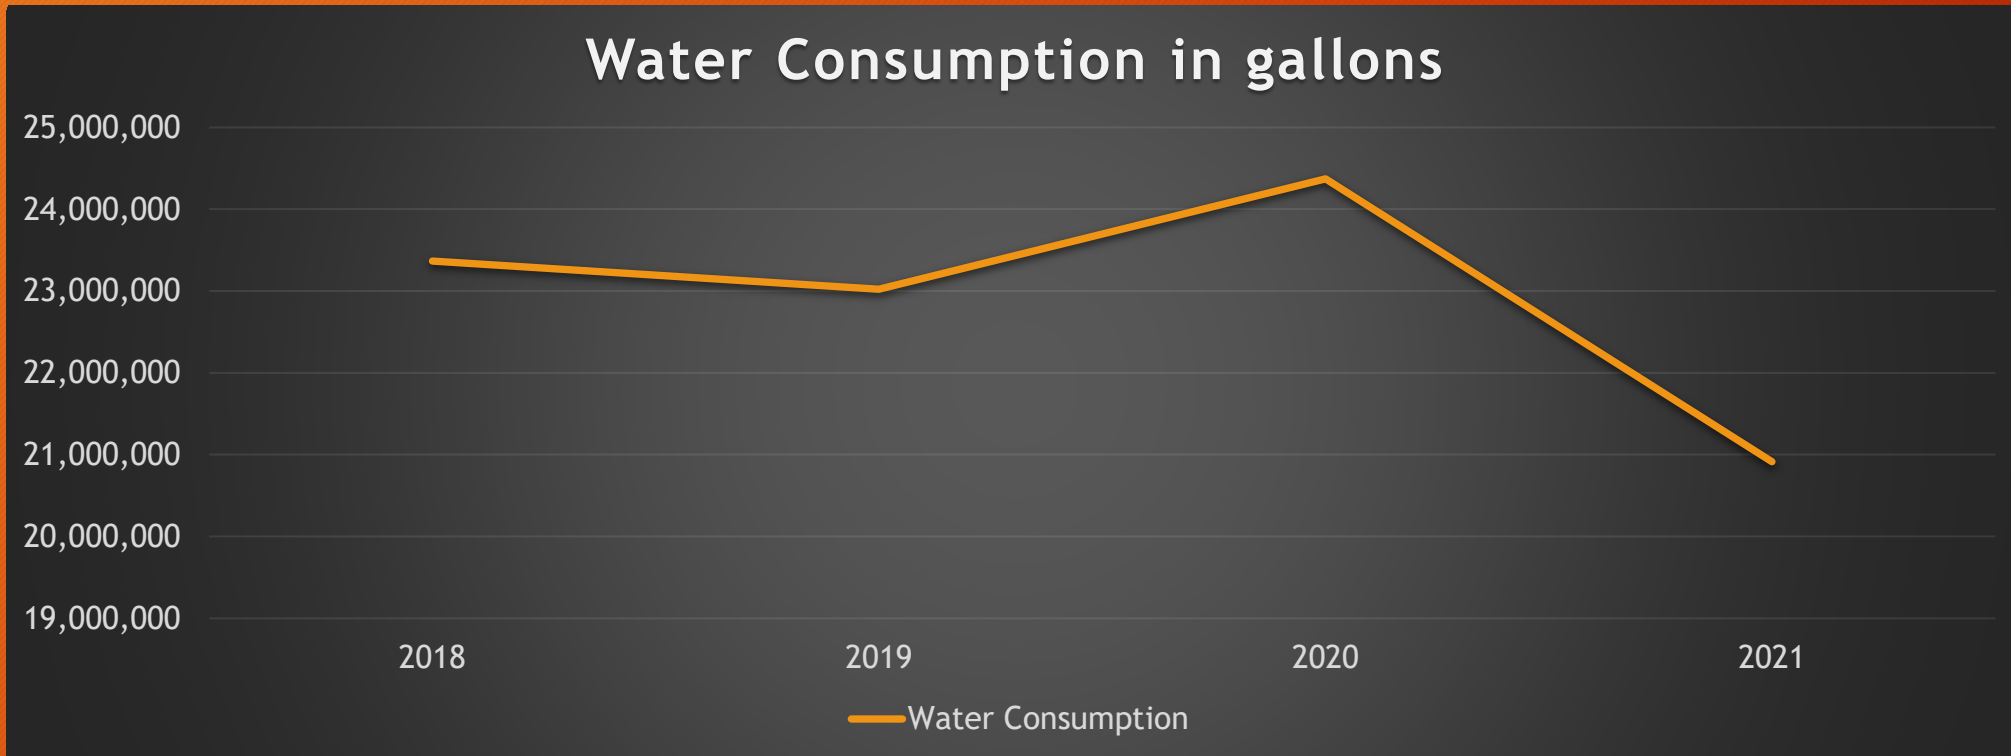

To support creative and innovative water recycling and reuse, Ball provided the Monticello POTW clean, 55 gallon plastic drums once used in its operations for distribution as residential rain water capture devices within the community.

Yearly Rainfall in Monticello IN

Annual Residential Water Usage

Providing the community's needs with recycle-reuse

- “I went to the city council meeting and requested the city to reinstate the sprinkler credit they previously removed because, due to COVID-19 and rising grocery prices, more people were gardening,” Armstrong said. “I left that council meeting thinking it was a waste of time. But Bob personally delivered our rain barrel after he listened to my request. Having someone listen and work to find an alternative to the community's needs was wonderful.”

Utility Customer systems

- Simple single barrel setup with diverter kit
- Or an elaborate multi barrel system connected in series.

God provides us the rain and we provide the means to recycle-reuse the rain and the container.

Thank You!
